Version 2026 — for the latest version, visit www.quinzeandmilan.tv/care

IN THE KIT what you receive

QM Repair Kit

- Bottle 1 — repair coating, in the colour of your furniture
- Bottle 2 — colour, for the finish
- Syringe
- Cloth
- Gloves

QM Retouch Kit

- Bottle 2 — colour
- Cloth
- Gloves

If you have the QM Retouch Kit only, go straight to part C.

BEFORE YOU START please read first

- A repair is like a scar: it stabilises the damage and keeps your furniture in good condition. The piece will not return to its original state and the repair remains visible.
- The colour is never 100% exact and may differ slightly from the surrounding surface.
- For use by adults only. Keep out of reach of children.
- Wear gloves, avoid contact with the eyes and work in a ventilated room. The products may give off an odour.
- Always apply the repair coating with the syringe, and the colour with the cloth or a small brush.
- Shake or stir the bottles thoroughly for 2 to 3 minutes before use. This guarantees a homogeneous colour.
- Do not use water or other liquid cleaning agents to prepare the surface.

A. CUTS AND TEARS no material is missing

1 The damage

2 Filling with the syringe

3 The repaired surface

STEP 1 Clean the surface with a brush or dry cloth to remove dust and dirt. Do not use water or liquid cleaning agents.

STEP 2 Dose the repair coating into the syringe.

STEP 3 Place the tip of the syringe into the opening and fill the cut from the inside up to the surface, over its whole length, so the coating connects with the borders of the surrounding coating. It bonds to the foam by itself. Let it dry for fifteen minutes. The product settles slightly while drying, which is why you work in several layers.

STEP 4 Apply a new thin layer and let it dry for another fifteen minutes. Keep the layers thin (max. 3 mm) and even. Repeat until the cured coating is level with the rest of the surface.

Then finish the repaired area with the colour — see part C.

STORAGE

BOTTLES
Close firmly and store in a cool place. The repair coating keeps for a few months, the colour for about six months.

SYRINGE
Reusable. Let the remaining product dry out inside it and remove the cured product.

B. REATTACHING A PIECE OF FOAM material is missing

STEP 1 Clean all surfaces with a brush or dry cloth.

STEP 2 Dose the repair coating into the syringe.

STEP 3 Apply some coating into the hole and onto the contact surfaces, so the foam is held in place, and put the piece back in its original position. Position it as precisely as possible to limit irregularities. Let it dry for fifteen minutes.

STEP 4 Clean the surface so no pieces of foam, dust or coating are left behind. They make a clean finish more difficult.

STEP 5 Finish the seams around the reattached piece as you would a cut: follow steps 3 and 4 of part A.

Then finish the repaired area with the colour — see part C.

C. TOUCHING UP THE COLOUR after a repair, or on its own

To finish a repair, or to touch up a dull, scratched or faded area.

STEP 1 Clean the area with a dry cloth. The surface must be dust-free and completely dry. After a repair: wait until the coating is fully cured and level.

STEP 2 Shake bottle 2 well and apply the colour with the cloth or a small brush, in a thin and even layer. Wipe lightly over the edges so the transition fades out. Wait fifteen minutes and repeat two or more times, until the colour matches as closely as possible.

STEP 3 Let the final layer dry for 2 to 3 hours. After that the furniture can be used again.

Larger damage or wear? We repair and recoat in our workshop in Belgium — send a few photographs to info@quinzeandmilan.tv.
